

# Disinfect Your Practice!

*Patients come in and out of your facilities all day long.*

*Many of them carry contagious pathogens that get transferred onto the surfaces in your examination rooms, hallways, rest rooms, waiting rooms, common areas, door handles, counters, and everything else they touch.*

*We don't have to tell you what that means.*

**You can't disinfect everywhere — but we can!**

We're **Patriot Ozone**. Our industrial-strength ozone generators can treat a room in one hour, destroying pathogens on every surface and even within fabrics.

Ozone is a proven, effective means of disinfection. Studies show it.

- *No chemicals*
- *No scrubbing*
- *No harsh after-odors — just a fresh clean scent*
- *Environmentally friendly*
- *Use the room within one hour after treatment*
- *Peace of mind*

Most rooms treated in 60 minutes or less.

We can work after hours so your practice isn't interrupted.

- *Licensed*
- *Insured*
- *Professional*
- *Affordable*

# Patriot Ozone

**919.610.1620**

**American Industrial Hygiene Journal, March/April 2003:**

[U]sing ozone as an airborne disinfectant for internal building surfaces ... is demonstrated to be feasible.

**SARS and Ozone Therapy: Theoretical Considerations by Gérard V. Sunnen, M.D., May 2003:**

Ozone has unique disinfectant properties. As a gas, it has a penetration capacity that liquids do not possess.

Ozone, in light of its pan-virucidal profile, offers the advantage of existing as a gas, with its attendant ability to disinfect poorly accessible spaces. Moreover, ozone has the distinct benefit of reverting to oxygen, while liquid-based disinfectants are likely to injure the surfaces to which they are applied, and to leave toxic residues.

## **POWERFUL — EFFECTIVE**

**Our professional / industrial-grade ozone generators use corona discharge technology that produces truly effective levels of ozone.**

**Hudson JB et al., Inactivation of Norovirus by ozone gas in conditions relevant to healthcare, Journal of Hospital Infection (2007):**

Our results show that Norovirus can be inactivated by exposure to ozone gas from a portable commercial generator in settings such as hotel rooms, cruise ship cabins and healthcare facilities.

**Your patients come to you for help. Don't send them home with pathogens they picked up from your office.**

**Call us today to set up an appointment**

We'll give you a free estimate... answer any questions... and show you how we can bring your office to a much higher level of cleanliness at very affordable rates.

We're based in Cary, NC
